## Water Storage Tanks

The Polar Cascade™ line of Storage Tanks are unique in that they have been designed so that if needed they can be shipped knock down and field assembled at the job site.

Sections can be added as required by the operating system to increase the capacity of the Tank. Each section has a capacity of 100 gallons. Additional sections can be added to increase the capacity of the Tank up to 1,200 gallons

All Tanks are manufactured from 12 gauge 235 galvanized steel.

Each Tank is shipped with a water level control valve
