

Cooling Tower Accessories

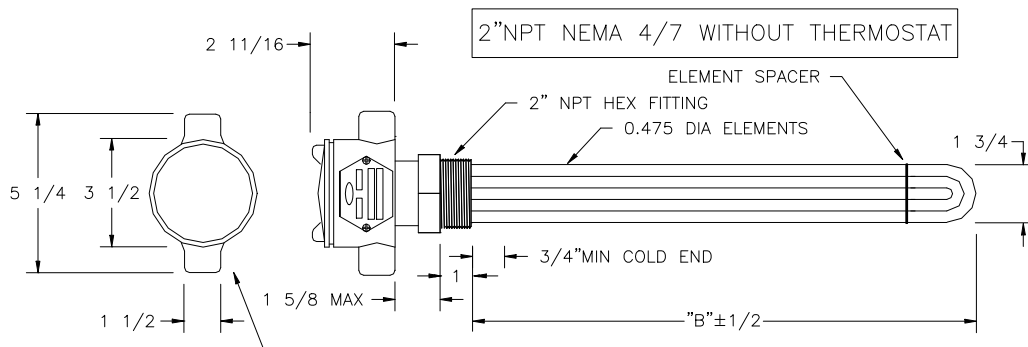

Basin Heaters

Basin Heaters are for those installations that the cooling tower is operating throughout the winter. During shut down periods it may be necessary to provide an immersion heater to protect the tower.

These heaters are supplied with a hub that has a built-in O-ring and locknut to make a pressure tight joint through a hole in metal basin walls. The heater is available for a “field installed” application only.

Liquid proof / Explosion-Resistant Outlet Boxes are furnished on all heaters

Polar Cascade Cabinet	Heater Voltage	Heater KW @ Volts	Heater Amps @ Volts	Heater Length "B"	Part Number
